FACE AESTHETICS

# EAR AESTHETICS

Cosmetic ear surgery, which has become one of the increasingly popular cosmetic applications all over the world, is called otoplasty. Otoplasty is plastic surgery operations performed to improve the shape, size, position or ratio of the ears. While providing a balance and proportion between the ear and the face, it helps to create a more natural look.

FACE AESTHETICS

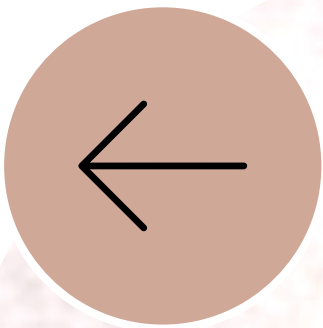

# FACE AND NECK LIFT

In the simplest terms, a traditional facelift is the surgical tightening of the middle and lower parts of the face. These parts include the area between the lower part of the cheeks and the chin, as well as the neck.

## EYELID SURGERY

Eyelid surgery is the surgical removal of excess skin of the eyelid present in some people to look younger and livelier. It is generally applied to correct the sagging of the skin on the edges of the eyelid and to increase the flattening of the sides. With this procedure, excess skin in the area, relaxed muscles, and sometimes excess fat (pads) in the lower and upper eyelids are reduced.

FACE AESTHETICS

# LIP LIFTING

The operation of shortening the distance between the vermillion border of the upper lip (where the red area of the lip merges with the skin) and the base of the nasal columella (the soft tissue that separates the nostrils) is called lip lifting. As a result of this operation, the tissue above the lip is pulled towards the nose, making the upper lip look more lifted and thicker.

FACE AESTHETICS

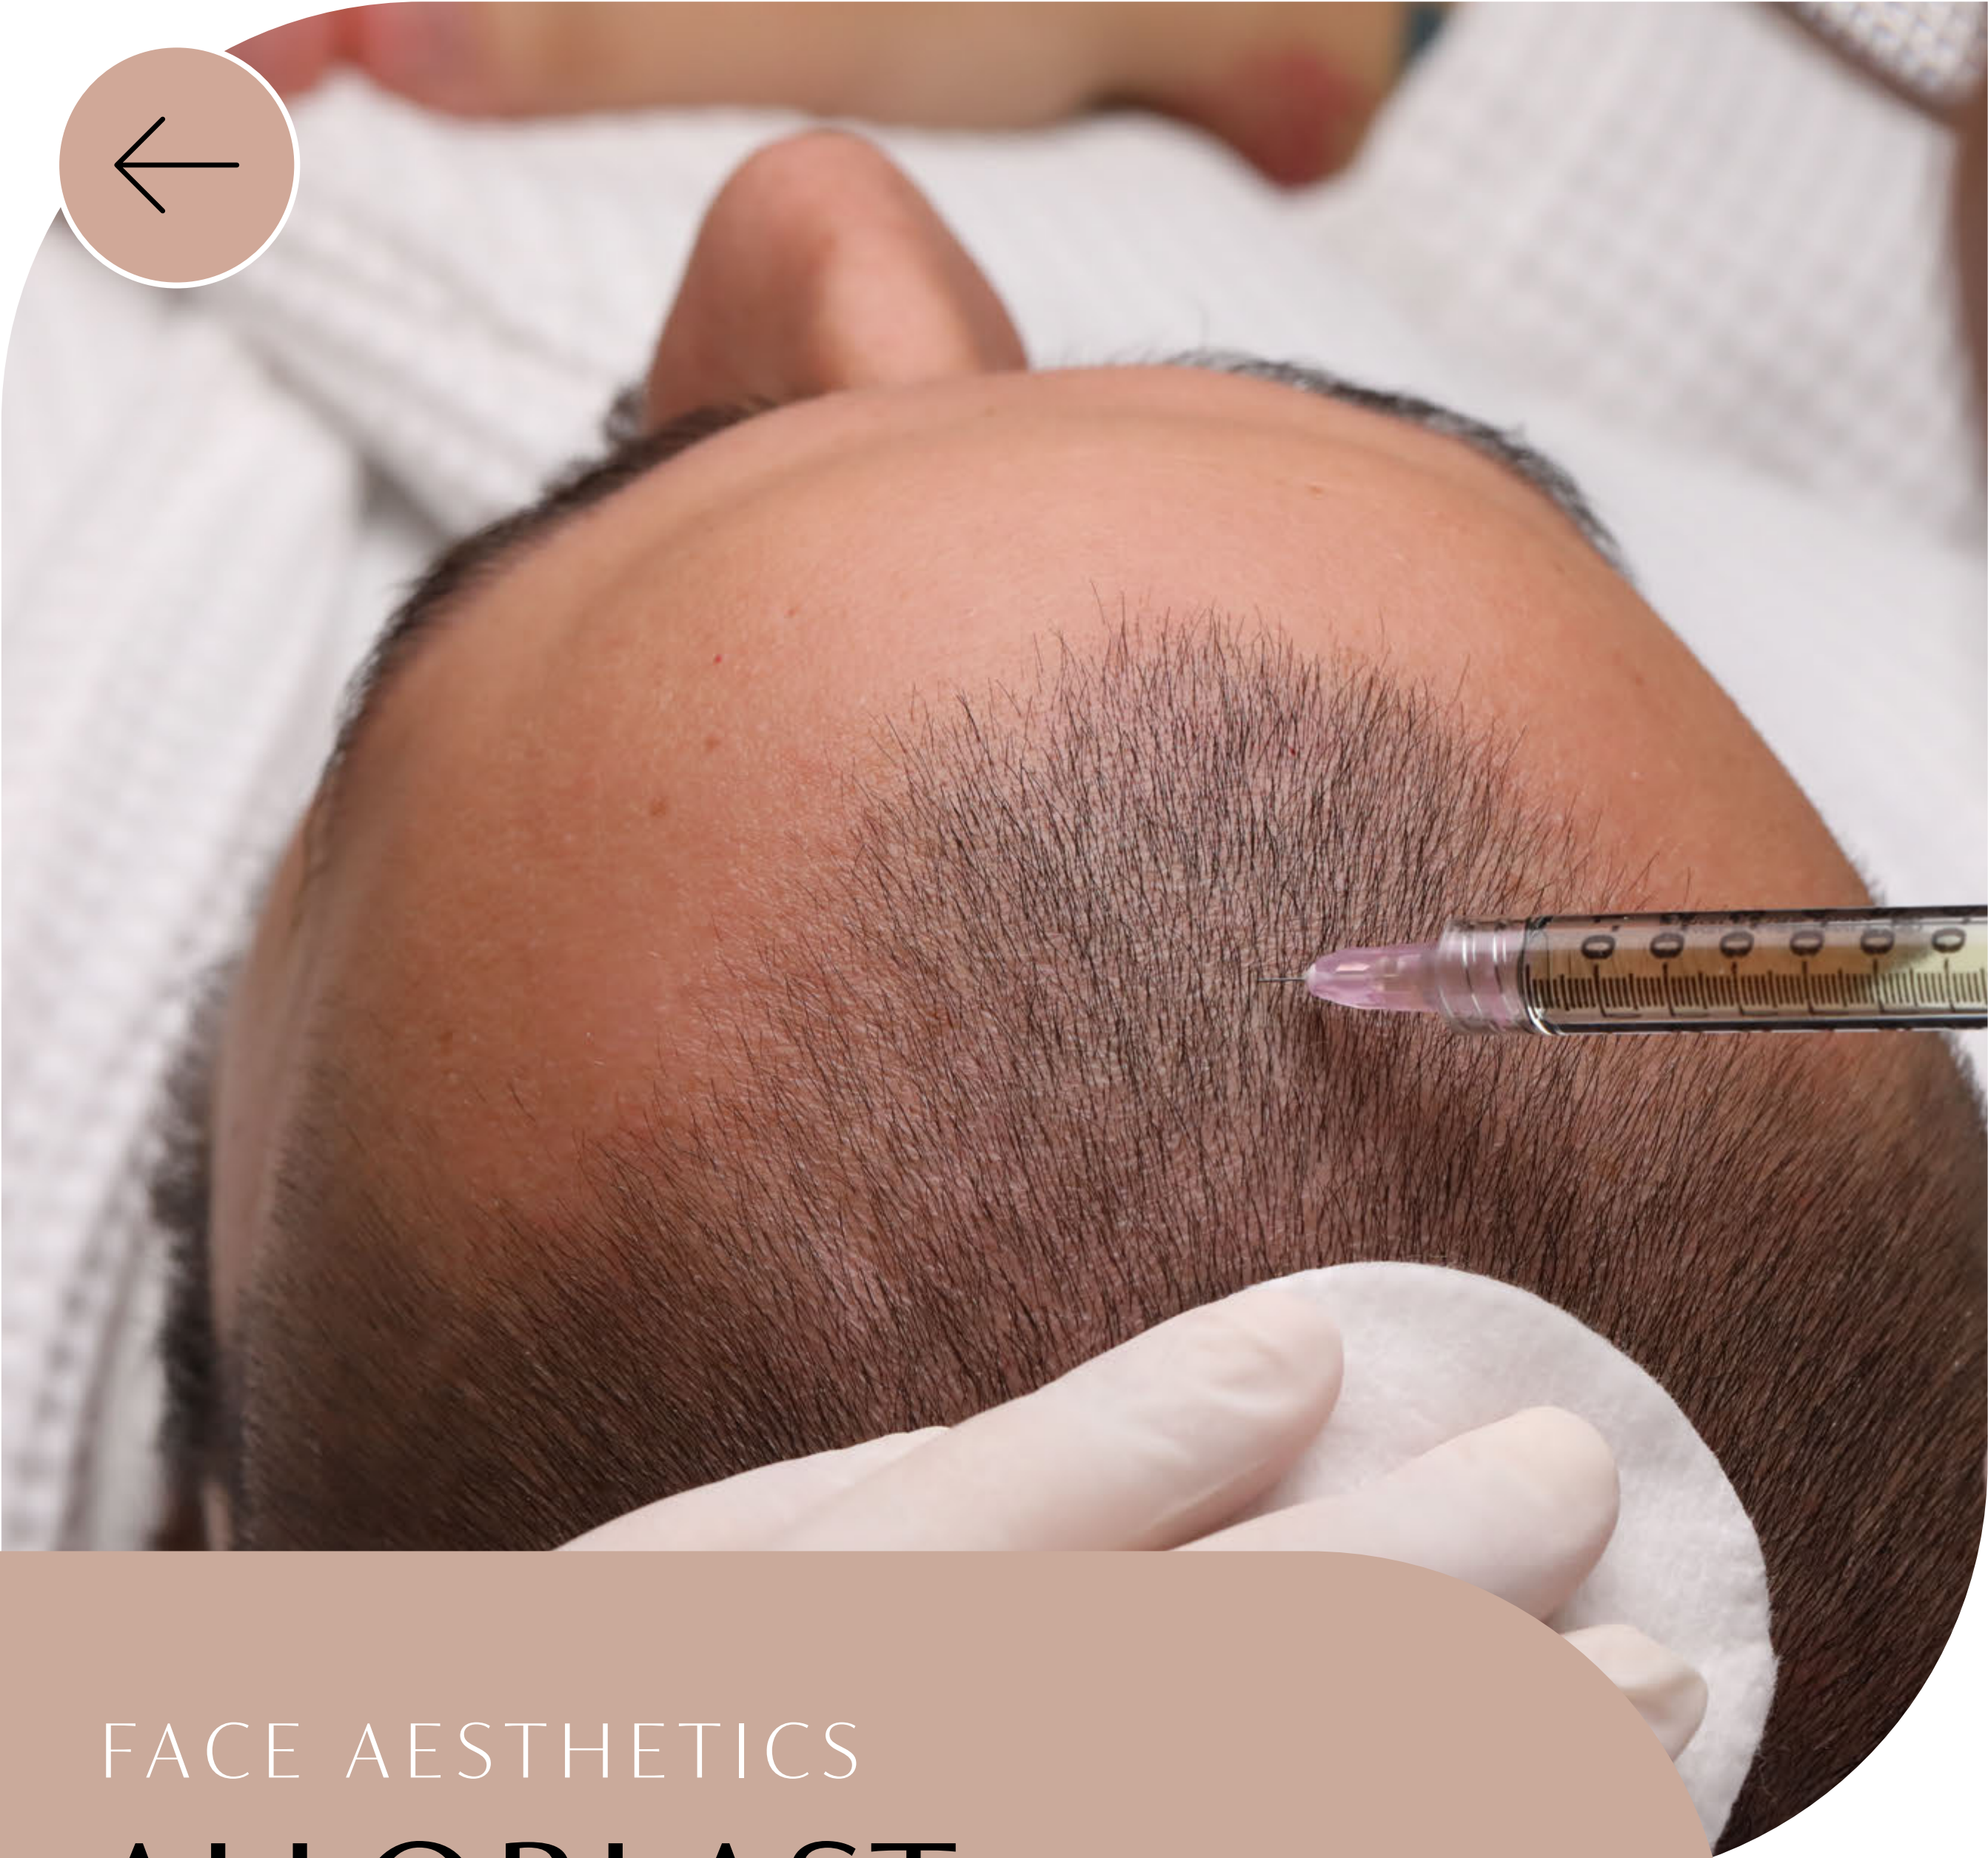

# ALLOBLAST (FACE)

Swiss Face (Alloblast) is the injection of stem cells, i.e. fibroblast cells, obtained from the foreskin of the newborn and multiplied in laboratories, to the area of need. As with other autologous stem cell treatments, fibroblast cells used in Swiss Face application are obtained from the sample tissue. However in Swiss Face, instead of the person's own cells, cells obtained from the newborn are used.

FACE AESTHETICS

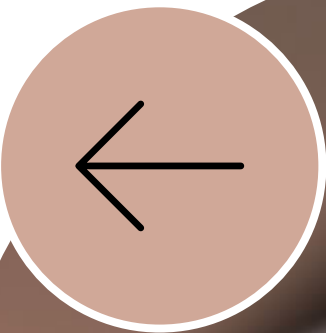

# ALLOBLAST (HAIR)

Young and fresh fibroblast cells injected into the scalp for hair become active in the area where they are released and produce collagen and elastin; they show a strong anti-aging activity on the skin and for the hair. Thus, hair strengthening are provided in a natural way.

FACE AESTHETICS

# NOSE AESTHETICS

*(Rhinoplasty, Septorhinoplasty, Preservation Rhinoplasty, Revision (Secondary) Rhinoplasty, Ethnic Rhinoplasty, Tip (Nose Tip) Rhinoplasty)*

Rhinoplasty is a cosmetic surgery operation performed to eliminate nasal health problems or to reshape the nose. Rhinoplasty can eliminate many physical problems of the nose. Although cosmetic reasons such as a low nasal tip and an arched nasal structure are among the reasons for rhinoplasty operation, there are also congenital or acquired medical reasons that may cause breathing problems.
