PLEXR

Plexr is a new generation device used for the treatment of various skin lesions, non-surgical tissue tightening, and reduction of deep lines and wrinkles. Using plasma energy, the fourth state of matter, Plexr converts the ambient air into plasma energy and applies vapor to the skin surface of the application area. Thus, it starts the regeneration process of the tissue area. It offers a rapid recovery period as it only affects the treated area.

LASER TREATMENTS

RED TOUCH

Red Touch can be briefly defined as a collagen selective laser application. It is a system that utilises laser beams with a wavelength of 675 nm and is designed to stimulate collagen fibers only. It has been shown in studies conducted by Swiss scientists at the University of Zurich that a wavelength of 675 nm especially increases the rate of collagen production.

LASER TREATMENTS

ICON LASER

The ICON Laser system is a light and laser system that creates a thermal reaction by applying a precise pulse of light energy to the lower layers of the skin. It emits energy to the lower layers of the skin in a controlled manner without causing any irritation on the skin surface. The body's self-repair system is activated and a process of restructuring is initiated in the skin. In this way, collagen fibers are stimulated and collagen production is triggered.

LASER TREATMENTS

LASER EPIILATION

Permanent removal of unwanted hair becomes possible with laser hair removal. Laser light targets the hair follicles in the area where the hair is located and destroys the hair through the melanin pigment. The method is effective in direct proportion to the hair color. During the application, laser light shines on the skin. It is applied in millisecond pulses and a comfortable application is provided by using cooling systems.

LASER TREATMENTS

REGENLITE LASER

Regenlite Laser is a Pulsed Dye laser system used to treat vascular spots and vascular-induced skin problems. This laser system targets the blood vessels in the skin and provides intense yellow light emission on these vessels. This light targets the blood inside the vessels, which helps to eliminate skin problems. It provides an effective treatment especially against skin problems such as capillaries, rosacea (rosacea) and vascular spots.

LASER TREATMENTS

STARWALKER LASER

Starwalker is a Q-Switched Nd: YAG laser used to remove blemishes from different layers of the skin. It is also preferred for tattoo and permanent make-up removal and hair lightening. It uses four wavelengths: 532, 585, 650, 1064 nm.

LASER TREATMENTS

FRACTIONAL LASER

It is a treatment method applied to provide an anti-aging effect, reduce acne scars, tighten soft tissue, renew the skin, correct periorbital (eye corner and eyelids) wrinkles, and remove spots (aging spots, melasma, sun spots, skin color changes).

LASER TREATMENTS

FEMILIFT: GENITAL REJUVENATION

Femilift is one of the alternative non-surgical solutions to genital area problems brought about by the advancements in laser technologies. Femilift is a fast, painless, completely safe and effective genital tightening and regeneration treatment.

LASER TREATMENTS

CAPILLARY TREATMENT

Capillary problems that occur on the face or in many parts of the body are treated using laser light that acts on a substance called oxyhemoglobin. This process causes the vessels to disappear over time as a result of overheating of the blood inside the vessel. The appropriate laser and head are selected according to the characteristics of the capillaries. In this way, capillary problems on the skin are effectively treated.

LASER TREATMENTS

LASER TATTOO REMOVAL

Laser tattoo removal is an effective method that uses high-energy laser light to target tattoo pigments. The laser light breaks down the tattoo pigments under the skin, allowing them to be absorbed by the body. This treatment offers an effective and permanent way to reduce or remove the appearance of the tattoo.
