SKIN REJUVENATION

COLLAGEN-STIMULATING

A collagen vaccine is a treatment that is administered under the skin with fine needles to improve the appearance and texture of the skin. When applied under the skin, this vaccine stimulates fibroblasts and triggers the production of new collagen and hyaluronic acid. In this way, the skin and subcutaneous tissue are repaired and renewed; wrinkles are reduced, acne and scars are corrected. It also helps the skin to tighten and regain its natural beauty.

SKIN REJUVENATION

AUTOLOGOUS STEM CELL THERAPY

Autologous stem cell therapy is a treatment method in which stem cells taken from behind the ear are used to produce fibroblast cells. As collagen and elastin production decreases with aging, some sagging and collapses occur in the skin, in short, signs of aging. These fibroblasts increase collagen and elastin production in the skin and reduce the signs of aging.

SKIN REJUVENATION

EXOSOME TREATMENT

Exosome therapy can be used to treat skin damage or signs of aging is a highly effective way to fight cell death. Exosomes can be thought of as tiny messengers that carry information between cells. This treatment involves special exosomes, usually derived from stem cells. Exosomes help the skin to repair itself and rejuvenate, giving it vitality, improves elasticity and accelerates wound healing. Exosome treatment is an innovative solution that supports the health of the skin.
